VOL. 24 — ARICHAT, CAPE BRETON, JUNE 16, 1925. — No. 24

Martha Jennie's N'Egg Did It

BY MINERVA L. GUTHAPFEL.

PART I.

"What's zat?" asked Martha Jennie Jones.

"A n'egg," said Jimmy Henning.

"What's n'egg?" persisted Martha, who was three.

"Sumthin' 'Eat," answered Jimmy, whose seven years of life were filled with knowledge. The two sat upon the wooden doorstep of a house in a squalid court, in the slums of a big city.

Martha Jennie Jones' drunken father and sickly mother had died within twenty-four hours of each other, leaving Martha in the yellow skin, mopping stage. Her neighbors (slightly curbed here, by the way) were slightly curbed here, to be raised by the neighbors or handed over to the charities.

Jimmy Henning's mother did laundry work. She had no one but Jimmy and often bewailed the fact that she "only had 'no livin' husband" but Jimmy had to "go 'n' keep her company and that she was "that lonesome for a gurl as never was." So when Martha Jennie, all unconscious of the terrible happenings around her, had looked up into Mrs. Henning's broad Irish face, pleading "take Martha," Martha was taken into her motherly arms and proclaimed at once to be her "adopted daughter by all the law an' perlice," and thus it was arranged, and no one else in all the world wanted Martha Jennie Jones.

Martha Jennie soon proceeded to question her way into life and to-day's question related to a round white object held in Jimmy's grimy hand. It had come from a bag wherein reposed similar objects. This was Jimmy's birthday and he had been allowed to choose an especial treat. He quickly chose a hard-boiled egg (Jimmy had luxurious tastes) and had been sent to purchase three for thirty-four cents, one for each of the family—an eleven and one-third cent treat spiree.

Now it happened that Martha Jennie's parents had never introduced her to an egg. Corn meal, fat bacon, bread and potatoes had comprised her menus thus far in life—at least when there was any menu. So, when Jimmy told her of her share in the day's treat, she took but little interest. Later, at the dinner table, her big black eyes watched the process of shelling the "n'egg" into the cracked saucer that did duty as a plate. With the first mouthful her indifference vanished. "N'eggs nice!" she shouted, "want more n'eggs!"

"Sure, it was an egg."

"A n'egg?" gasped Martha Jennie. How could that be? It wasn't blue, like the Zeester one, nor good to eat, like the birthday one, nor choclat, like the black one. "What kind of n'egg was it?"

"It was a hen egg," said the wise Jimmy. "They be many kinds o' n'eggs."

"Had," mused Martha Jennie and discussed the whole subject with Jimmy, as he magnanimously piloted her to the corner grocery and showed her a crate of eggs, each one lying in its own nice cubicle.

"An' where n'eggs live?" asked Martha Jennie.

"Sure," said Jimmy. And so the days went by.

August at last. Fifty children, all ages, sizes and conditions of raiment, lined up at the Union Station. Excited, awed, frightened, yet happy, the scrambling, chattering youngsters entered the special car reserved for them. When the farming community was reached, they were dropped off at the stations by two, three or in small bunches. Near the end of the line the train stopped at Lake View station and here our little folks were deposited. Jimmy, Martha Jennie, Alice Gordon, Mathilde Grey, six and nine years respectively, and Georgie Piersall, eight, whose right foot would not grow and whose crutch made the stillness of Lake View resound with its thump, thump, while its delighted owner shrieked, "There she is! Same old station! Here's the farm wagon. Why, if there ain't the same old cow!" Georgie had spent two weeks the previous year at Si Thomas' farm, to which the five children were consigned. So he knew all there was to be known about the country.

But my story concerns itself principally with eggs as they related themselves to the small girl already well introduced.

Martha Jennie could not be convinced that the chickens from which she regularly ran in fright, "laid" the eggs she saw in the nests and ate with such gusto at breakfast each morning. Jimmy and the others told her all about the great mystery but when Martha Jennie had been escorted to the barn to have the fact proven, to the farmer's wife was just putting a whole dozen of eggs into a nest out of a box, a "nettin," she called it, and Martha Jennie again declared to the much-tried Jimmy her unerring conviction that eggs grew in boxes. They did in the corner grocery, they did in the Mission Sunday School on Zeester Sunday, they did her: so n'eggs grew in boxes and that was all there was to it. The rest was a fairy story!

The days went by and all the children grew and were blissfully [illegible] at Lake View depot upon the platform the comfortable person of Mrs. Henning, who came in place of the Mission worker to look after the children. She surprised Farmer Thomas' family at supper and hugged each one in turn, for her heart was big enough to take in the whole brood.

The morning after she arrived, Martha Jennie hovered by her side until they were seated at the table and grace was said, and then burst out with, "Mother! There 'tis!"

"What, my little lamb? what is?"

"N'eggs! Lots of 'em. T'ain't no birthday. S'every day n'eggs."

"Why bless the child, how she do love eggs! It's eggs, my dearie, not 'n'eggs.' It's a fine lot of hens you must be having, ma'am, to lay you so many! Oh, thank you, ma'am, two be plenty for me. An' don't be given the child so many! She'll be wantin' them at home and hens don't lay 'em *there*!"

"Hens don't *lay* 'em!" said Martha Jennie, in scornful wisdom.

"Sure they do, darlin'. Haven't you seen the nests yet? And the bliddies and all?"

Martha Jennie volunteered no explanation and the subject was dropped. Mrs. Henning's attention was called to Jimmy. "There, there, Jimmy, you've et enough. Two eggs, pie, milk, sauce and all the rest—you'll be busting yourself. Not another bite. Come Martha Jennie, and show mother the hens that don't lay eggs before I help the kind lady with the dishes. It's a wonder the hunger of yez all left even the dishes!"

(To be continued.)

Splendor in Excess.

"The first carpet ever seen in a Nevada town," says an old-timer, "was in a parson's house. One day a little money came from the preacher's home folks back East. With it the parson bought the cotton; his wife spun it, had it woven and painted over in oil colors, with a gay border around the edge and groups of flowers in the centre.

"When the carpet was laid, the people were astounded at the magnificence of the preacher's parlor. One old chap, stopping at the door, was afraid to enter.

"'Walk in,' said the parson.

"'I can't,' said the old fellow, 'without steppin' on it. Do yo' think,' he added, in wondering admiration, 'ye kin have all that and heaven, too?'"

Britain's Expenditure.

During the year ending March 31, 1921, Britain spent £26,000,000 on National Insurance, £76,000,000 on Education and £31,000,000 on Poor Relief. Thirty years ago Education and Poor Relief cost together about £18,000,000.

Up But Not Ready.

Companion—"Get up, Clara, get up at once. A man has broken into the house!"

Miss Prassy—"I'm up, my dear, I'm up! But what have you done with the rouge box, I'd like to know?"

In the Highlands.

In the highlands, in the country places
Where the old plain men have rosy faces,
And the young fair maidens quiet eyes,
Where essential silence chills and pleases,
And for ever in the hill recesses
Her more lovely music
Broods and dies—

O to mount again where erst I haunted
Where the old red hills are hung enchanted,
And the low green meadows
Bright with sward!
And when even dies the million-tinted
And the night has come, and planets glinted,
Lo, the valley hollow
Lamp-bestarr'd.

O to dream, O to awake and wander
There, and with delight to take and render,
Through the trance of silence,
Quiet breathed
Lo, for there among the flowers and grasses,
Only the mightier movement sounds and passes;
Only the winds and rivers,
Life and death.

—Robert Louis Stevenson.

Goats in Alberta.

Goat statistics are not to be found in the livestock figures of the Dominion of Canada as the raising of these animals in Canada has never reached a status warranting its inclusion. The only province where goat raising has become thoroughly established and where it has arrived at undoubted success is British Columbia. Here there are approximately 5,000 of these animals, which have increased to these proportions from an original herd of 200 head imported from the United States in 1917, whilst a goat breeders' association in the province formed in the same year with a membership of 176, now has more than 400 adherents.

With its favorable conditions in many sections there seems no good reason why the Prairie Provinces should not have a flourishing goat industry, especially since this pursuit has proved so profitable in the province across the mountains. Alberta has at length its pioneer in W. A. Schroeder, who came from Switzerland and settled near McLeod, and has since been engaged in proving the feasibility of the goat-breeding industry in Southern Alberta and the profit to be found therein, which he would seem to have done conclusively.

He has one hundred goats, and with this substantial herd is following along the same principles of domestic dairying that have for generations been so successful in Switzerland. He is making fifty pounds of [illegible] and cheese every week, which finds its [illegible] the McLeod and Cal[illegible] markets. [illegible] sells on every [illegible] to this industry lies in the [illegible] claim the one gallon of goat's milk [illegible] makes as much cheese as two gallons of cow's milk, and each animal averages a quart at a milking.

Goats are easily raised n Alberta, according to Mr. Schroeder, who first experimented with sheep, especially on hilly or broken land such as is found in certain sections of this province. They are economical to keep because they feed largely on brush and weeds, the snow offering no deterrent to rustling, whilst they seldom fall victims to coyotes. The meat of the goat comes under the class of wild game, and from ten to twelve pounds of tallow are produced from each carcass. The pelts when well tanned are waterproof and have a good commercial value.

Mr. Schroeder's experiments have been watched with a good deal of interest throughout Alberta and the present herd is in rather general demand for foundation stock for other herds. Some have gone as far north as the Peace River country, where a miniature goat-dairying industry is in process of being established. Now that it has secured its start and certain proven advantages have been proven for it, there is every possibility of the goat-raising industry becoming established on the prairies of Western Canada.

Poplar is Best Target for Lightning Bolts.

A recently published work gives some interesting facts, obtained by careful observation and investigation, concerning the striking of trees by lightning. It appears that the poplar —known in Canada as the Lombardy poplar—is the tree most frequently struck, a fact probably due to its height and form, while the tree which suffers least from the electric fluid is the modest and gentle linden. After the poplar comes the oak, which is next preferred by lightning. Then comes the beech, the birch, the pine and the pitch-fir.

A German scientist has expressed his opinion that trees whose roots stick in a very compact soil are more exposed to lightning, and that owing to the conductibility of the soil the same is true of those the roots of which descend deep into the earth. Observations in several countries did not confirm the theory.

"So the boss is going to star you in a vamp part next summer? I suppose you had to convince him you could act the part?"

"No. His wife convinced him."

Hold yourself responsible for a higher standard than is expected of you. Never excuse yourself. Never pity yourself. Be a hard master to yourself—and be lenient to others.

HOW CANADA ADVERTISES.

Part of the staff of expert photographers employed by the Canadian Government Motion Picture Bureau to photograph all phases of Canadian industrial and agricultural life and development. The Laboratories at Ottawa are the finest in the Dominion. The pictures, especially a series of "Seeing Canada," are shown in all the countries of the world, thus advertising Canada's exportable products and promoting international trade.

A Royal Recognition.

His Royal Highness the Prince of Wales has graciously added his contribution to the progress of forestry in Great Britain and the Empire generally, in his acceptance of the office of President of the Empire Forestry Association. He presided on March 1st at the annual meeting of the Association, which was held at the Guildhall, London, England. In moving the adoption of the annual report of the Council of the Association, he said in part:

"We have had, the last three years, unrivalled opportunities of realizing the vast timber resources of our Empire . . . of actually visiting lumber mills in Canada and Australia. Without a cheap supply of timber, any progressive community must face disaster, having regard to the many needs we have for timber in everyday life, for which a regular and cheap supply is essential. This, however, can be secured only by close attention to forestry in all its aspects.

"If we are to accept the evidence of those who have made a study of the rate of consumption of timber, the world within the next twenty years will be faced with a timber shortage, if not an actual famine. No time must be lost in making provision for future supplies, steps must be taken to replant the vast forest areas devastated during the war, estimated in Great Britain alone at one million acres, of which probably not five per cent. have been replanted.

"The need for systematic forestry and the more fully realized and the doctrine of self-regeneration of forests so long relied on as the sole means of [illegible]

[illegible] European inventor uses a column of water instead of an electric wire to transmit electric power. The current passes through the water with the same facility whether the water is in motion or stationary, and can be delivered at any desired frequency, or in more than one phase. Used for drilling granite in Cornwall, England, the special tools designed for the water wave impulse deliver 50 per cent of the generated power, whereas the compressed air tools deliver only 10 per cent.

World's Biggest Newspaper.

A French journal has broken the world's record for both price and size. For only 40 centimes one can buy a morning paper of 232 pages, all solid reading, without advertisements. It is the government's "L'Officiel."

Sincerity.

A customary form of leave-taking in correspondence is the phrase "Sincerely yours." How often does it mean anything? Usually it is as insignificant as the word "Dear" which correspondents use at the start of their letters even when they are antagonistic.

Sincerity is one of the ancient, homely virtues fundamental to civilization, essential to the maintenance of society on a plane above the cut-throat, high-handed, hard-hearted basis of utter selfishness. Unless nations and individuals are sincere with each other, they will get nowhere in their mutual dealing. Each will be suspecting the other of a sinister, hidden aim—of keeping cards up the sleeve—of spying and prowling for advantages.

If you are sincere with me, I may believe what I read in your face; I may be sure that you are what you seem. I shall know that you will tell me the truth, though it be to your own hurt. In every act as in every word I shall find you genuine.

The power of statesmanship, as a Gladstone illustrated it or a Lord Robert Cecil exemplifies it in our immediate day, is the power of sincerity; the blight of politics, as it has been too often shown, is the curse of sly and evasive dealings, of roundabout trickery, of anything and everything but candor.

No solid work for public good or private benefit can go forward with the minds of liars directing it and their hands on its steering-gear. We must, whatever the enterprise, have leaders we can trust. Those who fool us for their selfish ends will sooner or later be set down where they belong; those who strove generously, with no mercenary bias in their zeal, will be known in time, and remembered affectionately by the race they served. It may have discouraged the honest to see how the dishonest were prospering; but at the end the cheaters came to grief and men saw them precisely what they were, and affixed to them their value and their definition.

As the lines are written there comes to the writer a printed eulogy of a public servant in which it is said that he was a "sincere advocate of all means of providing for good government." What was meant by the word "sincere"? Undoubtedly the intention was to say that this man had no ulterior motive in his effort to secure an able, clean and honest political administration. He sought no profit for himself. He did not say one thing and mean another; he kept his promises; he was true.

It is important to be sincere first of all with ourselves; not to deceive ourselves as to the sort of folk we are and the real reasons for what we do. Those who cheat themselves are ready to cheat anybody else, and to keep faith with the inner light and the monitor conscience is to make a right beginning in our dealing with our fellow-men.

Afternoon Tea.

Bird—"That fellow sings only in the afternoons, and not so well at that!"

Canadian Trade With Italy

Following the recent trade treaty concluded between France and Canada and as another phase of the preferential trade program arranged for in Europe by Canadian ministers, the terms of a similar favored nation treaty between the Dominion and Italy are announced. Though the clauses are brief they are extremely full and comprehensive, and apparently all that either country could desire to foster a mutual expansion of trade. Canada's export trade with Italy has undergone a surprising expansion, especially since the outbreak of the war, and the treaty is calculated to further stimulate this traffic, and at the same time, through facilitating the entry of Italian goods to Canada, augment the volume of the Dominion's imports from that country. The effects of the new treaty are generally summed up in the concluding clause, which states that in all matters governing the import, export and transit of merchandise Italy grants to Canada and Canada grants to Italy the treatment of the most favored nation. Articles, the produce or manufacture of Canada, imported into Italy and similar Italian commodities imported into Canada, shall not be subjected to higher or other duties than those paid on the same commodities from other countries, and similarly no prohibition or restriction shall be mutually imposed which is not equally extended to other countries. Articles from either country passing in transit through the country of the other shall be reciprocally free from all transit duties whether they pass through direct or are unloaded.

In the last fiscal year Canada's total trade with Italy amounted in value to $16,722,188, of which exports amounted to $13,326,818 and imports to only $3,387,370. Almost the entire volume of exports was attributable to vegetable products, consisting mainly of grain and flour, which had a value of $14,543,747, whilst the other two important items were animal products, which totalled $671,414, and non-metalliferous minerals totalling $103,625. Curiously Canada's greatest item of import was in vegetable products, amounting to $747,480, followed by fibre and textiles to the value of $325,606 and non-metalliferous minerals worth $137,304.

A survey of Canadian-Italian trade in the last fifteen years or so discloses the fact that whilst Canada's import trade has remained more or less at a standstill there has been a surprising increase in the volume of the Dominion's export trade. In the year 1910 the total volume of Canadian-Italian trade was $1,774,781 in value, of which Canadian imports amounted for $945,243 and exports $829,538, giving Italy a small favorable trade balance. By 1915 imports from Italy had increased to $1,597,548 and exports to $1,548,910. By the year 1920 imports had declined to $999,040 and exports increased to the surprising total of $16,959,557. While in 1921 there was only a relatively small increase in the value of imports, export value had increased by more than three times and amounted to $57,758,343.

Floating Lands for Home Sites in Holland.

Of all the countries of Europe, Holland affords, perhaps, the best example of how the topography of a country affects the habits of its people, and influences their lives. A considerable portion of the Low Country lies below the level of the sea, and it was to resist its cruel invasions that the gigantic levees, or dikes, were built. Never the less, some of the flooded regions, periodically inundated by the sea, have been water-logged for centuries, and one of these is the province of Overyssel. Perhaps its quaintest spot is the floating village of Giethoorn. Taking advantage of the condition of the soil, these hardy Dutchmen have learned how to cut away sections of turf, and then float them to the spot where they are wanted. Considerable skill, of course, is necessary to escape a duckling, because the footing is uncertain and slippery, and the marshland deceptive and treacherous. Poles, about 12 feet in length, are employed to shove off the floating home sites, which are cut away beyond the village [illegible] so men follow this work excitedly and, naturally, are very adept in the handling of their poles and the "islands" in their charge. Giethoorn has been built up in this manner.

The Oldest Bread.

An Assyrian loaf more than 2,400 years old has been discovered by a French explorer. It is supposed to have been baked in 560 B.C., and was in excellent condition when found. The loaf is bun shaped and was wrapped in a cloth in a tightly sealed sarcophagus.

Novel Boat.

A novel boat is both propelled and steered by jets of water ejected from a motor-driven pump in any direction desired by the navigator of the craft.

Electric Mummification.

The long-sought art of preserving the human form after death in nearly lifelike aspect, has apparently been achieved in a scientific method developed by an expert embalmer who, as a pioneer in this field, has devoted years of thought and patient investigation to the work. The method not only promises to afford a means of perpetuating the illustrious dead more successfully than the Egyptian mummies, but offers possibilities for the disposition of the dead in sanitary ways that introduce none of the objections of ordinary burial methods nor of cremation. As in many other modern inventions, electricity plays the leading part in the apparatus wherein the body is sterilized and dehydrated beyond the point where the organisms that cause decomposition can exist.

The apparatus, which has been assembled at small cost by the inventor himself, has the outward appearance of a sarcophagus and consists of a chamber which receives a rolling copper table upon which the body is placed. This table forms one [illegible] other terminal consists of a number of contacts made on the upper surface of the body. When the circuit is closed an electric current passes through the body at many different points, setting up sterilizing action due to the heat produced by the resistance offered by the body, and an electrolytic action that reduces the moisture. It is possible that the sterilization is assisted by the breaking up of saline solutions into chlorine and caustic soda, both active sterilization agents. Electric-resistance units placed below the table in the chamber supply additional heat, and an exhaust fan changes the atmosphere in the chamber at regular intervals. The electric-control devices provide for regulation of the temperature and current by means of red signal lights and an alarm bell as well as recording instruments. The success of the method is attested by experiments performed upon dogs and cats, and by a test upon the body of a man who was the victim of a bullet.

French Cut Forests Ancestors Planted.

By a strange trick of fate the French are now cutting down a forest in the Rhineland which was planted more than a century ago by their ancestors. When during the revolution the Rhine provinces were occupied by French armies they cut down the timber in the privately owned forests of Hanbruck, Eifel and Haardt which later became a part of the Reich's holdings.

The French on taking possession of the left bank of the Rhine found it necessary to replant these devastated areas and imported large quantities of Norwegian pines and similar trees from Savoie and the Pyrenees. Before the world war the Germans considered cutting down these trees planted by the French, but the forestry experts advised waiting until 1920, when they would be fully matured. According to the best estimates this delay cost the German empire at least 500,000,000 francs.

Reassuring.

Anxious Old Lady (on steamer)—"I say, my good man, is this boat going up or down?"

Surly Deckhand—"Well, she's a leaky old tub, ma'am, so I shouldn't wonder if she was going down. Then, again, her b'lers ain't none too good, so she might go up."

Mixing Up the Baby.

The inventor of a new feeding-bottle for infants sent out the following among his directions to mothers:

"When the baby is done drinking it must be unscrewed and laid in a cool place until the hydrant. If the baby does not thrive on fresh milk, it should be boiled."

Making it Easy to Understand.

Tough—"Do yer understand meh?"

Semi-American—"I understand not good English."

Tough—"Well, I ain't 'vin' yer no good English, am I?"

Canadian Hydro Development in 1923

The Dominion of Canada, with a total of 18,255,000 horse power available under conditions of ordinary minimum flow and 32,076,000 horse power dependable for at least six months of the year, takes second place to the United States in her possession of available water powers. In the amount of power available per capita of population, the Dominion occupies the second place, following Norway, and fills the same relative position in respect to that country in per capita power development. Canada's water-power development is substantial and in the main adequate to the country's requirements, but by reason of the Dominion's vast available resources, amounts to only seven per cent. of such present recorded water-power resources.

In the past ten years the yearly increment of new power made available has averaged 180,000 horse power. In the year 1922 Canada developed three million horse power of electrical energy from its water powers, considerably over the decade average. This was divided as follows:—Ontario, 1,320,000 h.p.; Quebec, 1,100,000 h.p.; British Columbia, 310,000 h.p.; and the remainder among the other six provinces. It has been estimated by the Federal Water Powers Branch that at the end of the last year the horse-power development in Canada per thousand of population was 337, the total capital invested in development $690,658,721; and the estimated revenue from development $81,600,000.

Increasing Industrial Demands.

The exceptional amount of new power development in 1923 was made necessary by the great demand arising from industrial establishment, and for the same reason, the year 1923 is from all indications to be an outstanding year. The present year promises to make a record in the location of new foreign industries, and new electrical development must keep pace with industrial progress. Canada offers many inducements to manufacturers in other lands to locate within her confines, and one of the greatest is that of cheap and dependable power. Thus the city of Winnipeg has achieved the distinction of providing manufacturers with electrical power at a lower rate than any other city on the continent, and rates throughout Canada can generally be stated to compare very favorably with those of other countries. To maintain this prestige much development will be undertaken in 1923.

Among the larger hydro developments undertaken in the past year or previously, which will be continued in 1923, are the Queenston-Chippewa in Ontario and the Great Falls in Manitoba. The main work of the Queenston project, which is part of the Niagara development, which with its 600,000 horse-power capacity, will be the largest electrical plant in the world, was completed in 1922, but the facilities are to be continually extended to the utilization of the maximum power. The development progressing at Great Falls, on the Winnipeg River, is the largest hydro undertaking west of Niagara, with an ultimate capacity of 168,000 horse power and to cost ten and a half million dollars.

New Development.

A new corporation, financed by American capital, the St. Maurice Power Company Limited, is to develop the Gres Falls and Gabelle Rapids on the St. Maurice River, in Quebec Province, having obtained leasehold power rights to these. The total installed capacity of the development is placed at 120,000 horse power and the capitalization of the company is in the neighborhood of $10,000,000.

Another Quebec development will be undertaken on the Riviere des Prairies where 50,000 horse power of electrical energy is to be developed by the Back River Power Company, at a cost of from six to seven million dollars. The Provincial Government has recently granted a sixty-year lease on the river rights to the company. Through arrangements completed between the Quebec Government and the Quebec Development Company, Canadian and American capital will combine in the building of a great dam at Grand Discharge from Lake St. John, the headwaters of the Saguenay River. With an initial unit of 200,000 horse power it is expected the project will eventually be developed to produce 1,000,000 horse power. Further hydro development in Quebec Province will be accounted for by the Southern Canada Power Company, which is initiating another large power development on the St. Francis River, which will produce 30,000 horse power.

The Great Northern Power Company Ltd. has been organized in Ontario to furnish the gold mining industries of the northern part of the province with power and assist in the general development of the territory. The company has under way the initial unit of a plant on the Montreal River, and it is expected that this first power unit of 2,150 horse power will be ready for distribution early this year.

Further Probable Development.

An important project which may materialize, is the development of Great Falls, the largest single water power in New Brunswick. It is estimated that with the minimum expenditure which could be made in harnessing the falls there would be available about 30,000 horse power. By adding storage facilities the power would be increased to 56,000 horse power, and by taking advantage of storage facilities at the headwaters of the St. John the power output could be increased to 80,000 or 85,000 horse power. Preliminary investigations have been under way by the Provincial Government for some time and the year may see actual development started.

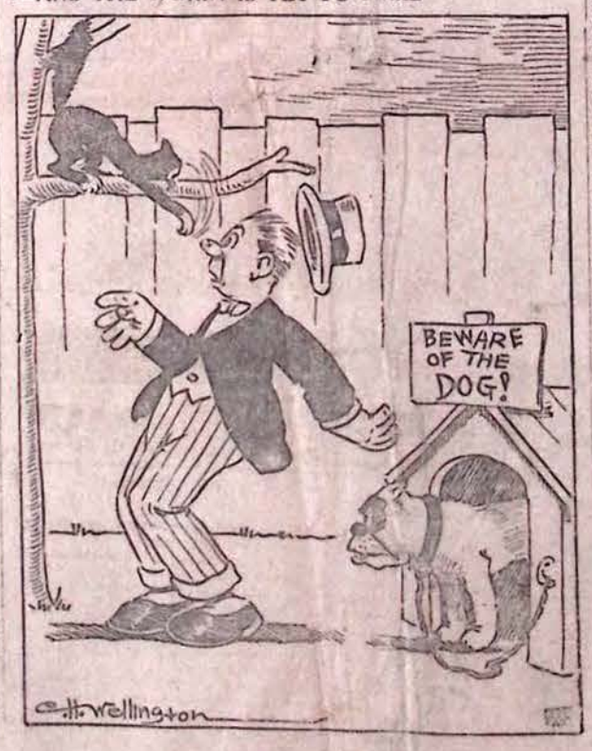

In 1922 large property holdings along the shores of the Gatineau River were acquired by the Hull Electric Company, which intends establishing a hydro-electric power plant this year with an ultimate capacity of 150,000 horse power, the cost of construction of which is estimated at $10,000,000. This is to be completed in two years. In the Province of Alberta there is a proposal by the Alberta Hydro-Electric Company to construct a plant at the Bow River, east of Calgary, to consist of four dams, the first of which will cost half a million dollars.

There are several new power developments projected in the province of British Columbia. Canadian Westinghouse is said to be planning the building of a great power plant at Seaton Lake, to sell power to a proposed pulp and paper plant, and to Seattle power consumers. Contracts have been signed for the installation of a 5,000 horse-power addition to the existing hydro-electric facilities at the Anyox smelter of the Granby Consolidated Mining, Smelting and Power Company, to cost in the neighborhood of $200,000.

While the developments here noted comprise only some of those of which notice was given prior to the conclusion of the past year, and there will doubtless be many more projects initiated in the course of the coming months, they are sufficient to indicate that the year 1923 will be an outstanding one in hydro-electric development. As new electric development means the exhaustion of available supply within sight, the new undertakings on such an extent are a fairly accurate gauge upon which to measure Canada's industrial progress. With such an expansion to electrical power being effected, an unprecedented development of the Dominion's industrial enterprises is confidently anticipated on all sides.

Perfectly well-meaning Old Lady: "Thank you so much for your song, my dear. It took me back to my childhood days on my father's farm. When I shut my eyes and listened to your singing I seemed to hear the dear old gate creaking in the wind."

BERTRAM BOURINOT,
Editor Publisher and Proprietor

Arichat, June 16, 1923.

At our doors there are great waters teeming with untold wealth of fisherics But what does that signify if the fish cannot be caught, cured and sold at a living wage? We knew last fall of a firm that had 3,000 barrels of salted mackerel. The market for these is principally in the middle section of the United States; but the duty and freight on the fish would leave the firm in debt after they were sold. Not many dollars' in that! But suppose the firm loaded $25,000 worth of maskerel on a vessel and carried them to some other market and sold them for what they cost them, $25,000 and freight. What were they to do to get a profit? Let us suppose that where they sold their fish, or at a nearby port, goods could be had for Nova Scotia consumption. They decided to load their vessel with these goods, pay $25,000 for them, expecting to sell them at home at a price which would pay insurance, wear and tear of the vessel, and the wages of the crew. When the vessel arrived at the home port she was sure to have an early visit from the Customs officer, who would examine the bill of lading, etc. The Customs official would apply the rate of duty which might be as low as 30 per cent, but seldom is on a miscellaneous cargo. The duty would amount to $7,500, reducing the value of his cargo to $17,500. The firm would have to sell the cargo for $35,000 before they could square themselves in the trade. Under these conditions how can Nova Scotians trade in fish, It is just such transactions that have in large measure driven the Halifax and other fish merchants out of the trade.

It may be asked, why not bring back the money and buy Canadian goods? For several reasons, one of them being that the $25,000 received for the fish would purchase, comparing Canadian prices with those of Great Britain and the United States, only about $17,500 worth of goods. In the first place, the Customs officer took the 30 per cent., or in the second place, the home producer took it by increased prices under the protection of the duty. Nova Scotians cannot engage in foreign trade under the embargo of the Canadian tariff, which is so dear to the heart of the Conservative party.

Soldier's Cove Ebb and Flow.

The farmers of the locality are late in getting their cropping done owing to unfavorable weather conditions.

D. K. McLeod, of Soldier's Cove, and John A. McNeil, of Soldier's Cove West, left for Pittsburgh, Penn., on May 31. They arrived in Boston June 2nd, where they will stay a short time visiting friends and relatives; thence to Pittsburgh, where they intend to get a permanent position.

James McDonald, of this place, and his brother Alex, who is at present employed on a farm in Antigonish, intend to leave for Detroit, Mich., on Monday, June 11, where their eldest brother Hugh is at present employed in the Ford plant, where has has a position awaiting his brothers.

Capt. Dan. Jackson and Capt. Landry, of St. Peters, arrived at Soldier's Cove on May 16th and loaded both vessels at the government wharf with pit timber for J. M. Cameron, Grand River, and sailed for Glace Bay on the 22nd.

The S. S. Richmond is making regular trips to Soldier's Cove now, this being quite a convenience to the public.

Walter A. McLeod is busily engaged in completing his contract for pit timber, which he took early in the spring,

A. M. McDonald and Ronald McNeil left lately for Detroit, Mich.

Lauchlin J. Sutherland, student at Truro College, is spending his vacation with his parents, Mr. and Mrs. Peter Sutherland.

D. J. Finlayson, Grand River, passed through here recently to visit friends and relatives at McNab's Cove.

Dan. Gillis left lately for Boston.

FOREST FIRE PERIL.

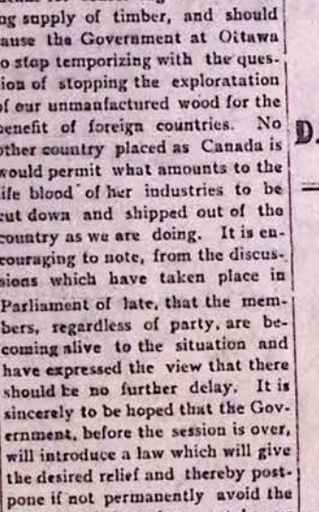

To the Editor of the Record:

Dear Sir—Canadians have only Providence to thank for the fact that the outbreak of fires in Northern Ontario, Northern Quebec and in New Brunswick did not make a clean sweep of the forest growths in those districts. No human agency could have brought the relief which came with the providential downpour of rain. But the menace is still with us and will be until the authorities adopt much more drastic means for forest protection than they have yet done and until the public is educated to the point of regarding the forests as real wealth and treating them as such. As things are, fires are likely to recur at any time and to wipe out practically all of the timber our pulp and paper industry now depends upon or its existence, except, perhaps, the very limited wood growing on the farm lots. We must not lose sight of the fact that notwithstanding the appalling losses that Canada has suffered from forest fires in the past, to day we have the added menace of two hundred million cords of dead, dry budworm killed trees that are blowing down and piling up, forming an interminable mass of dry kindling tinder nearly a period of drought and the dropping of a match or cigarette stub.

The heavy losses already sustained this season emphasize the necessity for using every available means for conserving our remaining supply of timber, and should cause the Government at Ottawa to stop temporizing with the question of stopping the exploratation of our unmanufactured wood for the benefit of foreign countries. No other country placed as Canada is would permit what amounts to the life blood of her industries to be cut down and shipped out of the country as we are doing. It is encouraging to note, from the discussions which have taken place in Parliament of late, that the members, regardless of party, are becoming alive to the situation and have expressed the view that there should be no further delay. It is sincerely to be hoped that the Government, before the session is over, will introduce a law which will give the desired relief and thereby postpone if not permanently avoid the crisis that is bound to overtake our wood-using industries if present practices are premitted to go unmolested.

FRANK J. D. BARNJUM
Montreal, June 11th 1923.

As it seems to be the fashion to get up and get out, we presume we shall all follow suit before long.

BLACK RIVER NEWS

The weather continues wet. Much grain has to be sown in this locality yet.

Mr. and Mrs. Dewey Cameron are spending a few weeks with the former's parents at St. G. C. Mr. Cameron has a lucrative position in Worcester, Mass.

Mackerel were selling here last week at two for a quarter we see by the Record where the fishermen got only five cents a piece for them, the middlman thus getting more than the man who braved the storm to catch them Fishermen, organize and get all that's coming to you!

A great many of our farmers are selling their cream to the Hawkesbury Creamery this year. A motor truck comes around twice a week collecting same. This is what we agitated for years and the Dairy Dept. at Truro and the Government are to be thanked for taking such an interest in the welfare of rural farmers. We hope it will prove a success and be continued.

H. E. MacDonald, Supt. of Roads and Bridges, was on an official visit here last week, we note some repairs have been made as a result of his visit.

We are of opinion that more attention should be given to what is called "lesser roads." Since the new Road Act came into effect they, in many cases, have been completely ignored. Many of our best farmers live along those Highways and something should be done to better conditions,

De Garay Andrews was on a motor trip to Baddeck with Harry Fownes last week While there he purchased a beautiful horse at the nice figure of $225 from Frank Fowne..

Several schooners are loading deal here from Fownes Bros, lumbermen which is being shipped to New York and Sydney. This enterprising firm employ thirty men at present.

A large bungalow and garage is being built in Dundee for W. F. Johnson, New York, on the property he recently purchased, Contractor Peter McLean, Cannes, is doing the work.

Much sympaty is felt for Mr. Allan McLachlan and family West Bay in the great sorrow that has come to them in the death of his youngest daughter, Minnie wife of Rod McFadyen, Port Hastings. Mr. McLauchlan's only son was killed at the front during the war and his wife also died a few years ago. We extend our sympathy to the family and Mr. McFadyen in their affliction.

West Coast Motor Tour

1. The C. P. S. S. Motor Princess. 2. Chuckaunt Drive, a link in the Pacific Highway. 3. Dance floor on the ferry.

NOT only have Bellingham, Wash., and Victoria, B.C., been brought into closer connection and more friendly relations by the recent inauguration of a ferry motor transport service by the new Canadian Pacific "Motor Princess", but western tourists as a whole have been provided with a new route to the Capital City of British Columbia, and one that has the alluring charm and refreshing diversion of a three and a half hours' water trip. The new water route for touring motorists from the mainland to Vancouver Island forms the base of a triangle which provides a circuit tour from Victoria through Nanaimo and Vancouver and via the beautiful Pacific Highway through New Westminster and Bellingham to Oregon and Washington destinations. This tour takes one through some of the most beautiful scenery on the continent. Exhilarating sea breezes are enjoyed along the whole route, which is through equable, that the semi-tropical foliage is pleasing to the eye and fragrant the year round.

In addition, the ferry links the wonderful roads on Vancouver Island with the California Bee Line, the western arc of the great 6,000 mile circle tour which embraces twelve national parks in the United States and three in Canada, and of which the Banff-Windermere Highway through the Canadian Rockies is to be officially opened on June 30th, forms one of the most delightful parts.

The ship which has made this Mainland-Island-Circle tour possible was specially designed for the service and possesses many distinctive features. She has parking space for 50 automobiles on two decks and accommodation for 250 passengers. A saloon, smoking room, restaurant, dance floor and deck spaces for promenading have been fitted up for the convenience of the travelling public, and the vessel is equipped with twin diesel engines which ensure a speed of 14 knots in all weathers.

"Cold in the Head"

is an Acute Attack of Nasal Catarrh Those subject to frequent "colds in the head" will find that the use of HALL'S CATARRH MEDICINE will build up the System, cleanse the Blood and render them less liable to colds. Repeated attacks of Acute Catarrh may lead to Chronic Catarrh.

HALL'S CATARRH MEDICINE is taken internally and acts through the Blood on the Mucous Surfaces of the System, thus reducing the inflammation and restoring normal conditions.

Catarrhal Deafness Cannot Be Cured

by local applications, as they cannot reach the diseased portion of the ear. Catarrhal Deafness requires constitutional treatment. HALL'S CATARRH MEDICINE is a constitutional remedy. Catarrhal Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result. Unless the inflammation can be reduced, your hearing may be destroyed forever. HALL'S CATARRH MEDICINE acts through the blood on the mucous surfaces of the system, thus reducing the inflammation and restoring normal conditions.

Don't forget the Garden Party on July 2nd.

Contracter E. C. Doyle went to Halifax last week on business.

Tea and Sale of Fancy and Useful Articles at the Garden Party on July 2nd.

The weather has been so cold up to now that it has chilled the farmers' enthusiasm in so far as seeding is concerned. Planting of patatoes is more advanced than other branches of farming. It is a hard climate for farming operations this year in this part of the universe; but warmer weather is coming and the farmers will soon be wearing smiles instead of frowns.

Have You Accommodation for Tourists?

Editor of the Record:

The Nova Scotia Tourist Association is desirous of obtaining information respecting all country homes in Nova Scotia which will have accommodation available this summer for tourists.

We shall be greatly obliged if any of your readers who would be willing to accommodate visitors for a few weeks write to us, giving us the following details:

Number of rooms available?
Boating, fishing, hunting facilities?
Has house verandah?
Distance from river, lake, sea-shore?
Special scenery in neighborhood?
Rate per week?

A. J. CAMPBELL,
Secretary, Nova Scotia Tourist Assn.

Halifax, June 7, 1923.

[illegible] year's international race off Gloucester, arrived in port yesterday morning and shipped several men here. The Ford was much admired as she lay at anchor off the government wharf and she presented a very pretty sight.

Schr. Malabar, Capt. D. S. Miller, struck the Lennox bridge on Saturday while sailing through the Passage in a good breeze. The vessel began to leak and Capt. Miller deemed it wise to beach her, which he did a mile to the westward of the bridge. The Malabar was bound from Sydney to Alberta, P. E. I., with a cargo of 120 tons of coal. The cargo is insured and Capt. T. J. Boudreau, acting for the underwriters, disposed of the coal yesterday at public auction.

Miss Catherine McIntyre, Kempt Road, who is attending high school here, will be a candidate for grade C at the exams to be held here the week after next

Among those intending to leave for the United States early in July and taking up their permanent abode in that country are Mr. and Mrs. L. C. Crowell and family of six children. This place can ill afford to lose any of its present meagre population; but what can a man with a family do when he suddenly finds his means of a livelihood taken away from him by the closing down of a local industry? It is also rumored that other families are contemplating moving out in the fall. Mr and Mrs. Peter Langlois and their two grandchildren, who removed here from Marble Mountain about three weeks ago with the intention of remaining, left for Pt. Edward last week to reside.

There is nothing like a fresh coat of paint to awaken all the latent self-respect in a man. Why, even the sunrise and the sunset have new wonder and glory to a grizzled old farmer when his buildings are all spick and span in a bright, new coat of substantial paint. Do not the fresh-coated buildings and the rising sun twinkle and shine in a merry good morning to each other? Take some gloomy, solemn, dog-eared old building—one that looks as if it were searching for an excuse for being born—and give it a cheery coat of paint. What a transformation! Changed from a pessimistic, drooping, forlorn old outcast, to a fresh, respectable, up-to-date member of the Order of Respectable Buildings. This world isn't half bad when you get some good paint on it. The word "paint" and "cheer" are, as the colored brother said, "anonymous and the same."

Putting First Things First.

(Contributed by A. C. McK.)

There is a journalism whose policy is guided by its own interest. Its first question to itself when deciding its stand on any issue is not "where, if there be any, is the truth and justice in this matter?" But: 'which attitude will help our circulation and increase our advertising revenue?"

There is another journalism which seeks first the truth that it may declare it and so promote the Kingdom of Heaven on earth—in the faith that these other things will be added unto it, and having put first things first, seeks the goodwill and co-operation of those who, likewise, put first things first. Such a newspaper is certainly a blessing in any country, and it is one of the strongest allies of every agency which, like itself, is devoted, first, to the cause of Right and Truth. Such is the aim of our Richmond Record.

Among the registrants at the American House yesterday was Mr. Thompson, of Antigonish, the genial and nice-looking representative of the Imperial Oil Co.

Robert Stead's Greatest Book

IN HAPPY NOVEL OF THE NORTHWEST

"Neighbours" is Nearer the Heart of Canada than Any Other of Famous Canadian Author's Books.

Romance of the Last Great Tide of Settlement in Saskatchewan Country is Big Theme.

You will never have to ask that question, "What is Canadian literature?" again when you have read Robert Stead's latest and, so far, his greatest novel, "Neighbours."

There are few Canadians who are not familiar with this author's former novels, "The Homesteaders," "The Cowpunchers," and "Dennison Grant." This new book runs true to the Stead tradition of a good story, real humour, pure love and a real idea—even some real mystery, and it has more of the real atmosphere of life in it, than any other which has come to us in a long while. It is true writing, and will add fresh laurels to the fame of this already well-beloved author.

ROBERT STEAD,
Author of "Neighbours," "Dennison Grant," "The Cowpuncher," "The Homesteaders," etc.

"Neighbours" relates how two families of young people, brother and sister, neighbours, in a little Ontario town; neighbours, fifteen years later on adjoining homesteads in the Saskatchewan country, find life and love. Their stories run smoothly until a young Englishman settles in the community and upsets all expectations, including the reader's. But the best part of "Neighbours" in my mind, and what makes it a great book, is the picture of the people who make up that far-scattered "Neighbourhood" of homesteaders, Jake is the old villain who finds "locations" for the gullible newcomer; the "Sneezits" are a gaunt big-eyed Polak family, who live in a cave that the precious live-stock may have builded shelter—and the widow, and the Scotch family—and the wedding! All of that is writing of the finest type, and places this Canadian book in high order among the best literature of to-day.

"NEIGHBOURS," a happy novel of the Northwest, by Robert Stead, Hodder & Stoughton, Toronto, $1.75

"Goodness me—
I've *forgotten* the name of that medicine—for the wife."
"What is it for, Sir?"
"It's to build up the system....."
"I *know* what you want, it's.....
Dr. Wilson's HERBINE BITTERS
a preparation made from Dandelion, Mandrake, Burdock, and other medicinal herbs. *Natural and harmless.*
A positive remedy for — Dyspepsia, Jaundice, Liver Complaints, Constipation etc., it purifies, enriches the blood and *removes that tired, drowsy feeling.* 50c. please—Thanks. You can also get the family size (4 times larger) for $1."
The Brayley Drug Co., Limited, St. John, N.B.

"Cold in the Head"

is an acute attack of Nasal Catarrh. Those subject to frequent "colds in the head" will find that the use of HALL'S CATARRH MEDICINE will build up the system, cleanse the Blood and render them less liable to colds. Repeated attacks of Acute Catarrh may lead to Chronic Catarrh.

HALL'S CATARRH MEDICINE is taken internally and acts through the Blood on the Mucous Surfaces of the System, thus reducing the Inflammation and restoring normal conditions.

CANADIAN NATIONAL EXPRESS COMPANY

Your Paying Teller —in every town!

SEND money quickly—and, above all, safely—by Canadian National Express Money Orders. The rates are as low as, and sometimes lower than by other methods. A Money Order for $5.00 costs only 3 cents—$30.00 costs 10 cents, etc.

Currency or coins sent in a letter may be stolen, destroyed by fire, or lost. If a Canadian National Express Company's Money Order is lost, the amount is recoverable. Over $100,000,000 reached the right hands last year through the medium of Money Orders.

These Money Orders are easy to purchase. No application blank to fill out. On sale at all hours of the day and evening at 3465 express offices—at thousands of sub-agencies in cities and towns. Payable immediately on presentation, practically any merchant or storekeeper will cash them or accept them. Can be endorsed any number of times. Are often used for paying home bills.

FOREIGN DRAFTS

The Company issues drafts in Foreign Money for any amount at lowest current rates of exchange payable by leading Banks and Bankers throughout the Commercial World.

FOREIGN POSTAL REMITTANCES

Immigrants and others sending money abroad profit by using Foreign Postal Remittances issued by the Canadian National Express Company, payable through Foreign Post Offices. The Company also transfers money by Cable or Telegraph.

TRAVELLERS CHEQUES

Traveler's Cheques issued by Canadian National Express Company are invaluable to tourists and commercial travelers. When signed in the presence of the paying agent, no further identification is necessary. They are accepted in place of cash by hotels, merchants and storekeepers everywhere. If a cheque is lost the amount is recoverable.

About the House

EDUCATED BY A GRINDSTONE.

"I'll be fifty-seven to-morrow," smiled Mrs. Pingree, rocking on the verandah of her white-and-green farm house, "and it seems as though it were only a few years ago when the boys were small."

She sighed again.

"Those were the years when it was hard pulling. My husband died when the children were very young. The farm was heavily mortgaged and we had to stretch the pennies until they fairly squealed. My friends told me I ought to work in my spare time. Well, a farmer's wife hasn't much spare time and besides, who could I have done? I could not sew. My fingers had become too clumsy with farm work to handle a needle delicately and work of other kinds would demand that I leave the farm which I could not do.

"Well, things went on for a while. I continued to do the manual work to which I was accustomed. I had always liked a man's work better than a woman's and I had quite a knack for handling tools.

"One tool I liked especially was an old grindstone in the barnyard on which I sharpened my knives. One day a neighbor, viewing with envy my shining and keen steel knives said, 'I wonder if you would be willing to sharpen my knives? You do such splendid work and I would gladly pay you.'

"I consented and that was the beginning of a little business. Other women brought me their knives and scissors and I charged according to the size of the utensils. I used to send the boys to 'gather them in' for me and sometimes they would bring home three or four dozen which they had labeled with the names of the owners. The next day they would return them, bright and sharp. And how farm women need keen tools!

"As my somewhat unique business increased, I bought a polishing machine and I soon received more orders than ever. One order which pleased me especially was from a hotel. They told me their employees were most deficient at polishing steel knives and, if I did good work, they would be willing to give all their work to me. With housewives, too, this task is a dreaded one, and my bank began to increase, accordingly. I followed up every opportunity and, of course, business brought more business.

"My business never forced me to neglect my farm duties. I always did the work on my own premises where I could oversee the work of the farm hands.

"The boys say they owe their college education to the old grindstone and that is perhaps the reason we never parted with it. To us, it shall always be, a much loved and honored member of the family."

TO PATCH OVERALLS.

Since the price of denim and overalls continues high, it behooves the thrifty housemother to make each pair of these work garments serve its full time. Usually the front of the legs, especially the knees, receive the hardest wear, this part often reaching the "holey" stage while the remainder of the garment is still stout and capable of considerable wear. Instead of unsightly and laboriously applied hand patches, a neater and more durable piece of work can be done on the sewing machine.

First rip the inside leg seam from hem to hem, in order to get the garment under the foot of the machine. As this is a continuous seam, the ripping, as a rule, can easily be accomplished by cutting through the hem at the bottom of the leg and pulling on each side of the seam, as the stitches have been weakened by wear and washing. If the stitches hold, rip the seam with the discarded blade of a safety razor.

From the unworn portions from the back of the legs of a discarded pair of overalls—or from new denim, if no partly-worn material is at hand—cut patches almost the width of the leg and long enough to extend from the crotch to well below the knee, taking in all the worn portion. Pin the patches in place—the experienced seamstress will find basting unnecessary—turn under the edges at top, bottom and outside of leg, and stitch in place with number 40 thread. The fourth side of the patch is taken up in the inside leg seam.

Starting at the bottom of the leg, stitch up the leg seam from hem to hem in an ordinary raw seam, keeping to the outer row of former stitching to give a neat appearance to the finished work. This seam can not be felled on the ordinary household machine, nor is this necessary, as the width of the old seam is sufficient to prevent pulling out if coarse thread is used.

CARING FOR THE "BABY TEETH."

I am going to remind you of a few important facts about the temporary teeth of children, commonly called the "baby teeth," because I find a great ignorance as to their importance. I find that parents are slighting their care, under the impression that they don't last long anyway and their decay is a matter of no great importance.

The temporary teeth are twenty in number. They begin to erupt at five to seven months and are all erupted by the time the child is from two and a half to three years old. At six years of age the child should get his first permanent teeth, the "six-year molars," and very important teeth they are. If they break through into a mouth that is filled with a lot of decayed teeth, there is grave probability that they will soon be infected.

There was a time, years ago, when the teeth of children never received attention, unless they had toothache. If the toothache was severe the offending tooth was extracted and the child got along in the best way possible. After a time it was found that the extraction of these teeth, even though they were only temporary teeth, interfered disastrously with the development of the jaw. Then we were advised that "baby teeth" should be allowed to remain in the jaw until their permanent successors came, regardless of their condition. Perhaps it is because of their advice that the teeth of present-day children so seldom receive attention of any kind. It is a very common thing to find children whose mouths are filled with dead roots. They have ceased aching but are foul and infectious, causing a constant stream of fetid pus which the child absorbs.

This virulent pus may give rise to heart disease of the most vicious type; it may cause joint infections; it is sure to destroy digestion. Please do not allow yourselves to think that because the children no longer complain of the pain of an abscessed tooth, its power to harm is therefore past. If the old snag or stump remains you may be quite sure that it is doing some damage, and perhaps a tremendous amount. Examine your child's teeth, yourself. If they show even a spot of decay take the little one to the dentist. He will clean up the tooth and put in a temporary filling that will save it from further trouble so long as it must remain in thee hild's head. If he cannot clean it up have it extracted, for there is no doubt whatever as to the damage that decayed teeth do to any child. Have these baby teeth cared for properly and the child will have them for mastication, and thus have better digestion. They will hold the jaw in proper place and allow the teeth that are yet to come down to have room to do so. Allow no one to tell you that they need no care, because they are "only baby teeth."

HOUSECLEANING HINTS.

To renovate a dust mop put a tablespoon of concentrated lye into about a gallon and a half of water and let mop boil in it. Rinse several times and the mop will be as good as new.

To clean painted walls, dissolve two ounces of borax in two quarts of water, add a tablespoonful of ammonia. Put half the mixture into a pail of water. No soap should be used with this mixture.

Use kerosene, hot vinegar or turpentine to remove paint from glass.

Forgive, Forget.

When angry words in haste are said,
Why do we choose a friend to maim?
Why not select a fiend instead,
The target for our deadly aim?

When we speak out the cutting jest,
And try thereby to wound some one,
Why thrust at them we love the best,
For some misdeed they may have done?

When to us come suspicion deep,
Why place the blame on some dear friend,
The love of whom we fain would keep
Throughout all time till life shall end?

I fear we trifle most with them
To whom we owe the greatest debt.
Forgetting love, the priceless gem,
Is only claimed in friends we've met.

Our stay on earth is short at most,
Can we afford to selfish be,
Or shall we play the kindly host,
To those who dwell with you and me?

If others would our joy assail,
We still may hope that deep regret
To them will come, if on the trail
We post the words, "forgive, forget."

I'm sure our brightest, sweetest day,
Will really be when we have met
Them face to face, and frankly say
"We can forgive and will forget."

—Verne H. Church

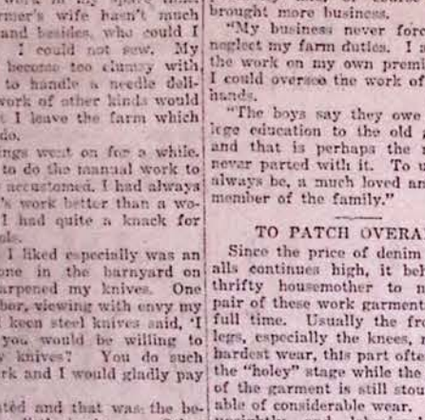

A Wrong Impression.

A young man, becoming engaged, was anxious to present his fiancee with a ring appropriately inscribed. Being at a loss what to have engraved upon it, he asked his father for advice.

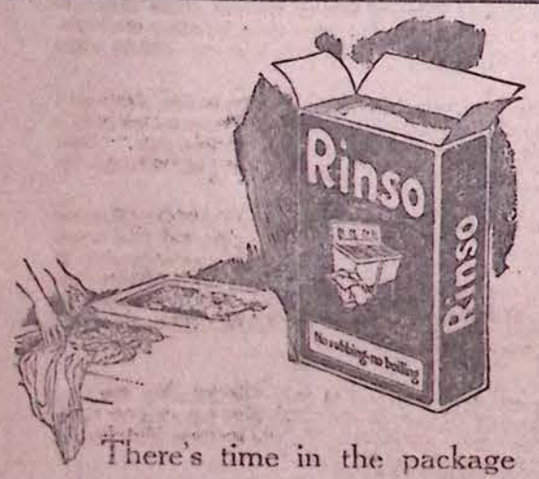

"Well," said the latter, "put 'When this you see, remember me.'"

A few days later the young woman was surprised to receive a beautiful ring with this inscription: "When this you see, remember father."

The Pure Wa

Water from a d
ltkely to be pure t
well because ther
pollution from th
age into the pip
five feet is not
when a driven w
its capacity there is
lution will be drawn in.

There are instances on record of driven wells which become polluted and spread typhoid when power pumps were used to pump the water from them.

As a rule deep wells furnish safe water if the top and upper stretches of the well are waterproof and properly protected.

Artesian Wells.

Artesian wells furnish safe water supplies almost without exception. Flowing wells are doubly safe because the water in its underground bed is safe and the pressure of the water in the pipe prevents inflow of pollution.

Hard waters are not as harmful as some people think. They waste soap and are severe on some fabrics, but there is little proof that they are harmful to health.

Stored Waters.

Stored Waters tend to purify themselves. Any disease producing bacteria die off in a short time.

On the other hand, stored waters are sometimes made offensive by birds rats, mice, insects and the various kinds of water weeds, particularly what are known as algae.

There is no fundamental objection to storing in underground cisterns. Such cisterns should have walls that are not porous and should be covered to prevent small animals from falling into them.

There is no health objection to a cistern in the attic if it is properly protected. A glassed window in the top of a cistern, permitting sunlight to reach the water, increases its safety for drinking purposes.

Fish That Sit Down.

Nature never produced a more remarkable creature than the Japanese goldfish.

Though they are called goldfish, their scales range in color from pink to bronze, blue, black, and combinations such as human craftsmen have never succeeded in copying. They have wonderful tails that remind one of bridal veils or fans, and they sit down on these whenever they feel tired.

Nature has provided them with a strange means of defence. Their eyes are telescopic. That is to say, the fish can manipulate them in such a way that they can see what enemy is chasing them, rear or flank. No other creature has such a wide range of vision.

The Japanese goldfish is of considerable value, some of them selling for four or five pounds, and quite a large trade is done. They are imported in specially-built aquariums, heated and ventilated in such a way that the occupants are not affected by changes of climate.

IS THERE A BABY IN YOUR HOME?

Is there a baby or young children in your home? If there is you should not be without a box of Baby's Own Tablets. Childhood ailments come quickly and means should always be at hand to promptly fight them. Baby's Own Tablets are the ideal home remedy. They regulate the bowels; sweeten the stomach; banish constipation and indigestion; break up colds and simple fevers—in fact they relieve all the minor ills of little ones. Concerning them Mrs. Moise Cadotte, Makamik, Que., writes: "Baby's Own Tablets are the best remedy in the world for little ones. My baby suffered terribly from indigestion and vomiting, but the Tablets soon set her right and now she is in perfect health." The Tablets are sold by medicine dealers or by mail at 25c a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Higher Tax, Lower Revenue.

An interesting example of the way in which high taxes defeat their own purpose is quoted by the Financial Post. At $6 a thousand, cigarettes were heavily taxed, but Canadians smoked nearly 2,500,000,000 a year. The tax was increased last year to $7.50 a thousand and smokers turned to pipes and to rolling their own. Cigarette consumption dropped by about half a billion a year and the government suffered a net loss in revenue of about $2,000,000. The higher tax actually provided a lower revenue. Taxes that are too high will always defeat revenue purposes.

MONEY ORDERS.

When ordering goods by mail send a Dominion Express Money Order.

An Awkward Question.

William's uncle was a very tall, fine-looking man, while his father was very small. William admired his uncle, and wished to grow up like him.

One day he said to his mother: "Mamma, how did uncle grow so big and tall?"

His mother said: "Well, when uncle was a small boy he was always a very good boy, so he was able to grow up big and tall."

William thought this over seriously for a few moments, then said: "Mamma, what kind of a boy was papa?"

Minard's Liniment for Corns and Warts

The more we live, the more we fear to offend the object of our love.

This Trouble is Located in the Blood, and Relief Comes Through Better Blood.

Rheumatism comes with thin, impure blood, and can only be driven out of the system by enriching and purifying the blood.

The chief symptom of rheumatism is pain. The most successful treatment is the one that quickly banishes this disagreeable symptom. Many rheumatic people suffer pains that could be avoided by building up the blood. The value of Dr. Williams' Pink Pills in rheumatic troubles is proven by the testimony of Mrs. A. Brysen, Arthur, Ont., who says:—"I was so used up with rheumatism in my shoulders and neck that I could not turn in bed without the help of my husband, and the pain at times was almost unbearable. I took doctors' medicine which did me little or no good. Then I began taking Dr. Williams' Pink Pills and have since been free from rheumatism. I can also recommend the pills to young mothers, as in my own case I found they are unexcelled. I may also add that I recommended Dr. Williams' Pink Pills to a neighbor who took fainting spells at the change of life, and who could not walk any distance. She took the pills for nearly three months and they made her a strong well woman."

You can get Dr. Williams' Pink Pills from any dealer in medicine or by mail at 50c a box from The Dr. Williams' Medicine Co., Brockville, Ont.

A French Cinderella.

With her departure from her home back of a druggist's shop to enter into the life of the Italian court, Claire Legue, a beautiful young French girl, takes rank with the Cinderellas of this world, says a despatch from Cannes, France.

Several months ago this seventeen-year-old orphan attracted the notice of Queen Helena of Italy. The Queen, passing through Cannes, visited the shop to see a collection of medals the girl had collected. She offered to buy sixty of them, but Mlle. Legue begged her royal visitor to accept them as a gift. Touched, the Queen invited the girl to Princess Yolanda's wedding.

"You know she is not marrying a prince," she explained. "I am giving her to a man of her own choice. I want you to come to the marriage."

One of the Queen's maids of honor came to Cannes to fetch Mlle Legue, who attracted much attention among the bevy of beauties who attended Yolanda at her wedding. But Mlle Legue did not return. She remains with the Royal Family at the Quirinal, treated as the Queen's own daughter, and it is even rumored she will be adopted by the Queen. If she is, the little French orphan may one day marry the Prince Yolanda could have had.

Our Longer Life.

Some little creatures have so short a life
That they are orphans born—but why should we
Be prouder of a life that gives more time
To think of death through all eternity?

Time bears us off, as lightly as the wind
Lifts up the smoke and carries it away;
And all we know is that a longer life
Gives but more time to think of our decay.

We live till Beauty fails, and Passion dies,
And sleep's our one desire in every breath;
And in that strong desire our old love, Life,
Gives place to that new love whose name is Death.

—W. H. Davies.

Wonderful Clock.

An Irishman was choosing a clock.

"This," said the assistant, "is an eight-day clock."

"Phwat d'you mean?"

"It runs for eight days without winding."

The Irishman stared at him.

"Glory be!" he said; "an' how long would it be runnin' if ye wound it?"

Ancient Hospital.

Few institutions can rival in antiquity St. Bartholomew's Hospital, London, which this year celebrates its seven hundredth anniversary.

The hospital was founded in 1123, in the reign of Henry I., and it holds the record of being the oldest in England. Among its first patients were English lords and Norman squires, who went to get relief for their arrow wounds.

The story of Bart's is the story of progress in surgery and medicine. When it began patients were dosed with powdered snails and concoctions of adders, bats, and earthworms.

Many thrilling episodes have marked Bart.'s existence. The Black Death and the Great Plague crowded its limited accommodation, and both added materially to the medical knowledge which, as the years advanced, was being gathered within its walls.

Hogarth, the great painter, served Bart.'s as a governor, and his painting of the Pool of Bethesda hangs on the great staircase. Of this picture, doctors say it is possible for any medical man to diagnose the different ailments of the patients, so faithfully did Hogarth depict them.

In the course of its eight hundred years the hospital has been rebuilt three times.

The Source of Thorinaite.

It is said that the mineral thorinaite, now largely used in the manufacture of the mantles for incandescent gas lamps, is at present not known to occur elsewhere than in the island of Ceylon. Its discovery was due to the operations of the Ceylon Mineral Survey. It is exported to Europe and America.

Minard's Liniment used by Physicians.

She—"Which do you prefer—blondes or brunettes?"

He—"Either one suits me. Don't bother to change on my account."

TREATMENT

MRS. A. HARBACH GAINS 24 POUNDS

Declares Taniac Restored Her Completely When Health Was Practically Destroyed.

"The Taniac treatment restored my health and strength and increased my weight twenty-four pounds two years ago, and I am one of the happiest women in Canada, for I have been feeling fine ever since," declared Mrs. Alice Harbach, highly esteemed resident of 26 Dundas St. W., London, Ont.

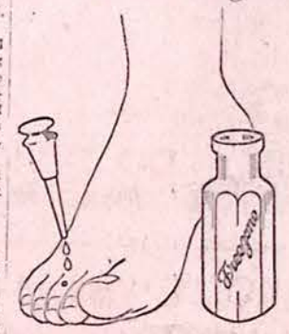

"I was so nervous I trembled like one with the palsy and feared a complete breakdown. I couldn't relish my food, many days I didn't eat a thing, and lost weight until my clothes were way too large for me. I had piercing headaches, was so weak I would give out before the middle of the day, and at night just seemed to hear the clock strike every hour. I suffered more agony than tongue can tell.

"But Taniac ended all my troubles, and if I had my say I would put a bottle in every home. It has won my everlasting gratitude, and I will always praise it."

Taniac is for sale by all good druggists. Take no substitute. Over 37 million bottles sold.

It is rather interesting to compare the price per pound of automobiles with the price per pound of other light machinery. Some cars sell for as little as fifteen cents a pound.

Enliven Your Eyes
through the Daily Use of Murine. The Alluring Sparkle of Youth Quickly Returns to Eyes which have become Dull and Lifeless. Used safely for many years. Sold by Druggists Everywhere.
MURINE For Your EYES

CORNS
Lift Off with Fingers

Doesn't hurt a bit! Drop a little "Freezone" on an aching corn, instantly that corn stops hurting, then shortly you lift it right off with fingers. Truly! Your druggist sells a tiny bottle of "Freezone" for a few cents, sufficient to remove every hard corn, soft corn, or corn between the toes, and the callouses, without soreness or irritation.
